Box No. III Non-establishment of opinion with regard to novelty, inventive step and industrial applicability

The questions whether the claimed invention appears to be novel, to involve an inventive step (to be non obvious), or to be industrially applicable have not been examined in respect of:

the entire international application
 claims Nos. 7

because:

the said international application, or the said claims Nos. _____ relate to the following subject matter which does not require an international preliminary examination (*specify*):

the description, claims or drawings (*indicate particular elements below*) or said claims Nos. _____ are so unclear that no meaningful opinion could be formed (*specify*):

the claims, or said claims Nos. _____ are so inadequately supported by the description that no meaningful opinion could be formed.

no international search report has been established for said claims Nos. 7

the nucleotide and/or amino acid sequence listing does not comply with the standard provided for in Annex C of the Administrative Instructions in that:

the written form has not been furnished

does not comply with the standard

the computer readable form has not been furnished

does not comply with the standard

the tables related to the nucleotide and/or amino acid sequence listing, if in computer readable form only, do not comply with the technical requirements provided for in Annex C-bis of the Administrative Instructions.

See Supplemental Box for further details.

**WRITTEN OPINION OF THE
INTERNATIONAL SEARCHING AUTHORITY**

International application No.	PCT/JP2004/015841
-------------------------------	-------------------

Box No. V Reasoned statement under Rule 43bis.1(a)(i) with regard to novelty, inventive step or industrial applicability, citations and explanations supporting such statement

1. Statement

Novelty (N)	Claims	4 , 5	YES
	Claims	1-3 , 6 , 8-14	NO
Inventive step (IS)	Claims		YES
	Claims	1-6 , 8-14	NO
Industrial applicability (IA)	Claims	1-6 , 8-14	YES
	Claims		NO

2. Citations and explanations:

Documents

1. JP 2001-32189 A (Tomoegawa Paper Co., Ltd.)
2. JP 2003-96698 A (Unitika Ltd.)
3. JP 2-259199 A (Lenzing AG)

Claims 1-3, 14

Document 1, page 1, table 1, embodiment discloses a papyraceous material that uses a polyimide as the main heat resistant fiber and a tetrafluoroethylene-hexafluoropropylene copolymer as a high melting point binder fiber. The present application deals with fibrous polytetrafluoroethylene, but paragraph 0021 of the specification says that it includes hexafluoropropylene copolymers in the scope thereof. Therefore, the invention described in document 1 has no difference in the type of fiber constituting the composite papyraceous material. Also, the polyimide made into a fiber is crystalline and thermoplastic.

Claim 6

Claim 3 of document 1 includes a configuration in which the main fiber is not fibrilled, i.e. is a short fiber. The values for fiber diameter and fiber length stipulated in the present application are also within the normal range.

Claim 8

The documents do not describe the peak area ratio of the melt heat absorption curve at the low-temperature side, but in the present application they are all within this range, including the comparative examples. As that is considered a property of polytetrafluoroethylene, this appears to be the same as in document 1.

Claim 9

In document 1, the polytetrafluoroethylene is a binder fiber; therefore it is thermally melted and adhered.

Claims 10-13

The processes described in each claim are ordinary methods in papermaking. The invention described in document 1 also has a thermocompression rolling process as a pressure treatment with heating after a drying process.

Therefore, the inventions of claims 1-3, 6, and 8-14 do not possess novelty.
